

東海大学理学部数学・情報数理談話会

以下の要領において談話会を開催致します。多数の方の御来聴をお待ち致しております。

日時: 2026年6月26日(金) 16:00–17:00

会場: 東海大学湘南校舎 18号館 **7階情報数理ゼミ室 1 (18-701)**

講演者: 安保広達氏 (Department of Mathematics and Statistical Science, University of Idaho)

タイトル: On the classification of surfaces of non-general type in projective four-space

アブストラクト: Hartshorne and Lichtenbaum conjectured that the degrees of smooth rational surfaces in projective four-space are bounded. In 1989, Ellingsrud and Peskine confirmed the conjecture by proving a stronger result: the family of smooth surfaces of non-general type in projective four-space is bounded.

The classification of smooth surfaces in projective four-space has been completed up to degree 10. Significant progress has been made toward classifying smooth, non-general-type surfaces of degree 11. However, the classification problem for higher-degree surfaces remains less well understood.

This talk aims to review the current status of the classification of these surfaces and to discuss previously unknown examples with degree 12, sectional genus 13, and Euler characteristic 2.

This is joint work (still ongoing) with Kristian Ranestad and Frank-Olaf Schreyer.

世話人: 那須 弘和
